Subject: Comments on California Water Plan Update

Paul, I have some new numbers, developed by Metropolitan Water District of Southern California, for water conservation in the South Coast Hydrologic Region and I have a few general comments for that document.

Volume 3, Regional Reports, Chapter 5. South Coast Hydrologic region, p 5-4, line 6.

Demands in the region BY 700,000 ACRE FEET PER YEAR. (My source the MWD Five Year-Conservation Strategy Plan, which was recently developed by Tim Blair and his staff in the MWD Conservation office.)

P 5-10, end of second line, "...manufacturing codes." Add the sentence: Overall, the region is accomplishing about 700,000 acre-feet annually.

P 5-14, before the Ocean water desal paragraph. Add a new paragraph:

"In 2004 MWD updated its Integrated Resource Plan with the goal of annually achieving 1.1 million acre-feet of region-wide conservation by 2025. This goal is to be achieved by sustaining pre-1990 conservation of 250,000 acre-feet, 500,000 acre-feet from compliance with plumbing codes and other laws, and 300,000 acre-feet from active program-based conservation."

Re the general comments.

P 5-3, 3rd para, next to last line, "Because water quantity and water quality are inseparable...

P 5-7, MTBE paragraph, last sentence, "As of January 1st..." WHICH JANUARY FIRST?

THAT IS IT. For the South Coast. Fran
